

Polytives *bFI*

Polymer-based flow improver appropriated for thermoplastics

- Save energy, cut costs
- Optimise processes
- Compatible
- Products stay recyclable
- Overcome technical limitations
- Use our innovation, take advantage of your market

Flow improved properties of *bFI*
applied to PMMA

bFI, the latest flow improver of Polytives, can save energy, reduce process time, and maintain the chemical properties of the customers aimed polymer product. Non-toxic and easy-to-use our additive provides the perfect scenario for the production process. Furthermore, the resulting plastics will be one step closer to recyclability and therefore sustainability.

Use our expertise to improve your (work) flow.
